Gordon ChaseWall™ System

ChaseWall™ Attributes

The Gordon ChaseWall™ provides a clean, secure barrier between equipment corridors and the data hall. ChaseWall™ is a non-progressive design, engineered to be easily assembled from only one side, with the head track attaching directly to the Gordon Grid™. In addition to being durable and structurally sound, the installed cost of ChaseWall™ is comparable to a finished gypsum board wall, but without the contamination associated with taping, floating, sanding, and painting inside the white space.

The Gordon Advantage

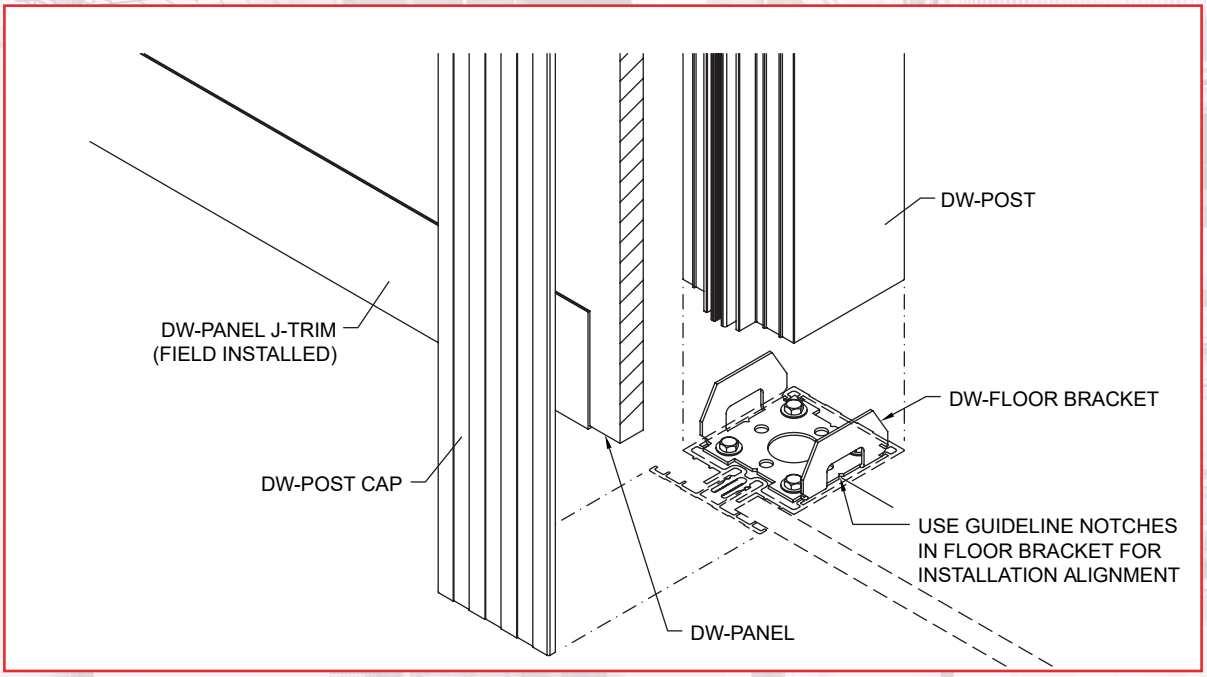

- Modular 4’ (nominal) width partition wall panels
- Easy to maneuver and install
- Engineered for rapid installation…8-10 times faster than drywall construction!
- Non-progressive wall construction
- Adaptable for multiple panel types
  - 16mm Triple Wall Polycarbonate (std)
  - Honeycomb aluminum
  - Custom perforated with Powder Coat finish
- Class A rated components for flame spread/ smoke generation
- Post cap trim designed for snap-in or screw-attached installation

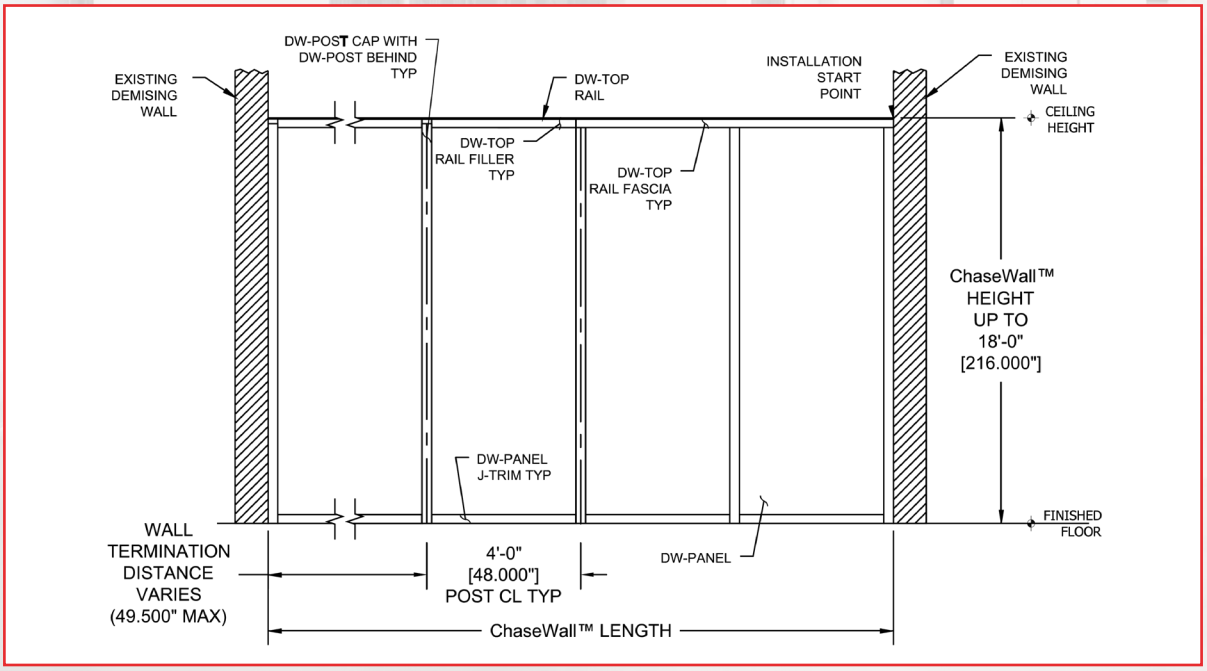

The Gordon ChaseWall™ is ideal for data hall applications where large fan units are deployed.
